- Med Broil: Elements operate at low power.
- Hi Broil: Elements operate at high power.
- Low Broil: Elements operate at low power.
- Low Broil: Elements operate at high power.

**Self-Clean**
- Use this function to clean the oven.
- Preheat: 1 hour at 475°F before cleaning.
- Self-Clean: Use this function for cleaning.
- Preheat: 1 hour at 475°F before cleaning.
- Self-Clean: Use this function for cleaning.

**About the Cooktop**
- Surface Indicators: They light and dim as needed by the cooking process.
- Control Knob: Use to select functions and adjust heat intensity.

**Preheat**
- For best results, it is recommended to preheat the oven to the desired temperature before placing food inside. This will ensure even cooking and avoid hot spots.

**Hot Surface Indicator Lights**
- These lights indicate when a surface element is hot. They turn off when the element is turned off.

**Oven Functions**
- Broil: Use this setting for broiling foods.
- Bake: Use this setting for baking foods.
- Convection Bake: Use this setting for baking and roasting foods at the same time.
- Convection Broil: Use this setting for slow cooking.
- Convection Roast: Use this setting for roasting.
- Convection Defrost: Use this setting for defrosting foods.

**Oven Temperature**
- Oven Temperature Control: Use this control to adjust the oven temperature.
- Oven Light: Use this switch to turn the oven light on or off.

**Surface Heating Settings**
- Setting: Use this setting to change the heat intensity.

**About the Cooktop**
- Single Front or Rear Element: A single element at the front or rear of the cooktop. These elements are used for cooking with a single burner.
- Dual Radiant Elements: These elements are used together for cooking with two burners.
- Single Rear Element: A single element at the rear of the cooktop.
- Control Knob: Use this switch to turn the element on or off.
- Interior Oven Light Switch: Use this switch to turn the interior oven light on or off.
- Interior Oven Light: Use this switch to turn the interior oven light on or off.

**About the Cooktop**
- Surface Elements: These elements are used for cooking.
- Left Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Center Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Right Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Left Front Burner Control/Knob: Use this switch to turn the element on or off.
- Center Front Burner Control/Knob: Use this switch to turn the element on or off.
- Right Front Burner Control/Knob: Use this switch to turn the element on or off.
- Right Front Burner Control/Knob: Use this switch to turn the element on or off.

**About the Cooktop**
- Interior Oven Light Switch: Use this switch to turn the interior oven light on or off.
- Interior Oven Light: Use this switch to turn the interior oven light on or off.
- Left Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Center Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Right Rear Burner Control/Knob: Use this switch to turn the element on or off.
- Left Front Burner Control/Knob: Use this switch to turn the element on or off.
- Center Front Burner Control/Knob: Use this switch to turn the element on or off.
- Right Front Burner Control/Knob: Use this switch to turn the element on or off.

**About the Cooktop**
- Surface Indicators: They light and dim as needed by the cooking process.

### Important Safety Notice and Warning

**DANGER**

- Always install unit by a qualified technician. Unit is heavy and must be properly installed and grounded by a qualified technician.

**WARNING**

- The range is very heavy and must be properly installed and grounded by a qualified technician. To avoid injury or damage, do not attempt to move the range until it is installed and in service.

- Other potentially hot surfaces include range top, heating elements, or interior surfaces of an oven.

**CAUTION**

- Always use caution when handling screws, nuts, and bolts. These parts are sharp and can cause cuts or injuries.

### Heating Elements and Glass Ceramic Cooktop

**Surface(s) warmer or adjacent to the unit may be hot.**
- Do not touch the oven heating elements, areas near heating elements, or interior surfaces of an oven.
- **DO NOT** touch hot clothing or other flammable material near heating elements.

**CAUTION**

- The oven door, especially the glass, can become extremely hot to the touch.

**NOTICE**

- The oven door and glass may be hot for several minutes after oven is turned off. When the oven is in use, the vent and surrounding area become hot enough to cause burns. After oven is turned off, allow the oven door to cool before opening.

### Quick Reference Guide

**WARNING**

- **BURN HAZARD**

  - When cleaning, remember to wear oven mitts to avoid burns.

  - **DO NOT** touch hot oven heating elements or interior surfaces of an oven.

  - The oven door, especially the glass, can become extremely hot to the touch.

**NOTICE**

- To avoid injuries and food waste, use appliance only for cooking food. Do not use appliance as a space heater to heat or warm a room to prevent potential hazard to the user and damage to the appliance. Also, **DO NOT** use appliance as a space heater to heat or warm a room to prevent potential hazard to the user and damage to the appliance.

- **ELECTRICAL SHOCK HAZARD**

  - Never attempt to adjust, service, or install the appliance unless all controls are OFF and oven is COOL before replacing bulb.

  - Make sure all controls are OFF and oven is COOL before cleaning. Failure to do so can result in burns or electrical shock.

  - Never attempt to install or service the appliance unless all controls are OFF.

### Quick Reference Guide

**WARNING**

- **ELECTRICAL SHOCK HAZARD**

  - Never attempt to install or service the appliance unless all controls are OFF.

  - Before any service or cleaning, turn off the electrical supply to the appliance.

  - Before any service or cleaning, turn off the electrical supply to the appliance.

**NOTICE**

- To avoid injuries and food waste, use appliance only for cooking food. Do not use appliance as a space heater to heat or warm a room to prevent potential hazard to the user and damage to the appliance. Also, **DO NOT** use appliance as a space heater to heat or warm a room to prevent potential hazard to the user and damage to the appliance.
